It takes only the merest acquaintance with the facts of the modern world to note that it is now an interactive system in a sense which is strikingly new. Historians and sociologists, especially those concerned with translocal processes and with the world systems associated with capitalism, have long been aware that the world has been a congeries of large-scale interactions for many centuries. Yet today’s world involves interactions of a new order and intensity. Cultural transactions between social groups in the past have generally been restricted, sometimes by the facts of geography and ecology, and at other times by active resistance to interactions with the Other (as in China for much of its history and Japan before the Meiji Restoration). Where there have been sustained cultural transactions across large parts of the globe, they have usually involved the long-distance journey of commodities (and of the merchants most concerned with them) and of travellers and explorers of every type. The two main forces for sustained cultural interaction before this century have been warfare (and the large-scale political systems sometimes generated by it) and religions of conversion, which have sometimes, as in the case of Islam, taken warfare as one of the legitimate instruments of their expansion. Thus, between travellers and merchants, pilgrims and conquerors, the world has seen much long-distance (and long-term) cultural traffic. This much seems self-evident.

But few will deny that given the problems of time, distance and limited technologies for the command of resources across vast spaces, cultural dealings between socially and spatially separated groups have, until the last few centuries, been bridged at great cost and sustained over time only with great effort. The forces of cultural gravity seemed always to pull away from the formation of large-scale ecumenes, whether religious, commercial or political, towards smaller-scale accretions of intimacy and interest.

Sometime in the last few centuries, the nature of this gravitational field seems to have changed. Partly due to the spirit of the expansion of Western maritime interests after 1500 and partly because of the relatively autonomous developments of large and aggressive social formations in the Americas (such as the Aztecs and the Incas); in Eurasia (such as the Mongols, and their descendants, the Mughals and Ottomans); in island Southeast Asia (such as the buginese); and in the kingdoms of pre-colonial Africa (such as Dahoney), an overlapping set of ecumenes began to emerge, in which congeries of money, commerce, conquest and migration began to create durable cross-societal bonds. This process was accelerated by the technology transfers and accelerations of the late eighteenth and nineteenth centuries, which created complex colonial orders centered on European capitals and spread throughout the non-European world. This complex and overlapping set of Euro-colonial worlds (first Spanish and Portuguese, later principally English, French and Dutch) set the basis for a permanent traffic in ideas of peoplehood and selfhood, which created the imagined communities of recent nationalisms throughout the world.

With what Benedict Anderson has called ‘print capitalism’, a new power was unleashed in the world, the power of mass literacy and its attendant large-scale production of projects of ethnic affinity that were remarkably free of the need for face-to-face communication or even of indirect communication between persons and groups. The act of reading things together set the stage for movements based on a paradox -- the paradox of constructed primordialism. There is, of course, a great deal else that is involved in the story of colonialism and of its dialectically generated nationalisms, but the issue of constructed ethnicities is surely a crucial strand in this tale.

But the revolution of print capitalism, and the cultural affinities and dialogues unleashed by it, were only modest precursors to the world we live in now. For in the last century, there has been a technological
explosion, largely in the domain of transportation and information, which makes the interactions of a print-dominated world seem as hard-won and as easily erased as the print revolution made earlier forms of cultural traffic appear. For with the advent of the steamship, the automobile and the aeroplane, the camera, the computer and the telephone, we have entered into an altogether new condition of neighborliness, even with those most distant from ourselves. Marshall McLuhan, among others, sought to theorize about this world as a global village, but theories such as McLuhan's appear to have overestimated the communitarian implications of the new media order. We are now aware that with media, each time we are tempted to speak of the 'global village', we must be reminded that media create communities with 'no sense of place'.

The world we live in now seems rhizomic, even schizophrenic, calling for theories of rootlessness, alienation and psychological distance between individuals and groups, on the one hand, and fantasies (or nightmares) of electronic propinquity on the other. Here we are close to the central problematic of cultural processes in today's world.

Thus, the curiosity which recently drove Pico Iyer to Asia, is in some ways the product of a confusion between some ineffable McDonaldization of the world and the much subtler play of indigenous trajectories of desire and fear with global flows of people and things. Indeed Iyer's own impressions are testimony to the fact that, if 'a' global cultural system is emerging, it is filled with ironies and resistances, sometimes camouflaged as passivity and a bottomless appetite in the Asian world for things Western.

Iyer's own account of the uncanny Philippine affinity for American popular music is rich testimony to the global culture of the 'hyper-real', for somehow Philippine renditions of American popular songs are both more widespread in the Philippines, and more disturbingly faithful to their originals, than they are in the United States today. An entire nation seems to have learned to mimic Kenny Rogers and the Lennon sisters, like a vast Asian Motown chorus. But Americanization is certainly a pallid term to apply to such a situation, for not only are there more Filipinos singing perfect renditions of some American songs (often from the American past) than there are Americans doing so, there is, of course, the fact that the rest of their lives is not in complete synchrony with the referential world which first gave birth to these songs.

In a further, globalizing twist on what Jameson has recently called 'nostalgia for the present', these Filipinos look back to a world they have never lost. This is one of the central ironies of the politics of global cultural flows, especially in the arena of entertainment and leisure. It plays havoc with the hegemony of Euro-chronology. American nostalgia feeds on Filipino desire represented as a hyper-competent reproduction. Here we have nostalgia without memory. The paradox, of course, has its explanations, and they are historical; unpacked, they lay bare the story of the American missionization and political rape of the Philippines, one result of which has been the creation of a nation of make-believe Americans, who tolerated for so long a leading lady who played the piano while the slums of Manila expanded and decayed. Perhaps the most radical postmodernists would argue that this is hardly surprising, since in the peculiar chronicities of late capitalism, pastiche and nostalgia are central modes of image production and reception. Americans themselves are hardly in the present any more as they stumble into the mega-technologies of the twenty-first century garbed in the film noir scenarios of sixties 'chills', fifties diners, forties clothing, thirties houses, twenties dances, and so on ad infinitum.

As far as the United States is concerned, one might suggest that the issue is no longer one of nostalgia but of a social imaginaire built largely around re-runs. Jameson was bold to link the politics of nostalgia to the postmodern commodity sensibility and surely he was right. The drug wars in Colombia recapitulate the tropical sweat of Vietnam, with Ollie North and his succession of masks - Jimmy Stewart concealing John Wayne concealing Spiro Agnew and all of them transmogrifying into Sylvester Stallone who wins in Afghanistan -- thus simultaneously fulfilling the secret American envy of Soviet imperialism and the re-run (this time with a happy ending) of the Vietnam War. The Rolling Stones, approaching their fifties, gyrate before eighteen-year-olds who do not appear to need the machinery of nostalgia to be sold on their parents' heroes. Paul McCartney is selling the Beatles to a new audience by hitching his oblique nostalgia to their desire for the new that smacks of the old. Dragnet is back in nineties drag, and so is Adam-12, not to speak of Batman
and Mission Impossible, all dressed up technologically but remarkably faithful to the atmospherics of their originals.

The past is now not a land to return to in a simple politics of memory. It has become a synchronic warehouse of cultural scenarios, a kind of temporal central casting, to which recourse can be had as appropriate, depending on the movie to be made, the scene to be enacted, the hostages to be rescued. All this is par for the course, if you follow Baudrillard or Lyotard into a world of signs wholly unmoored from their social signifiers (all the world's a Disneyland). But I would like to suggest that the apparent increasing substitutability of whole periods and postures for one another, in the cultural styles of advanced capitalism, is tied to larger global forces, which have done much to show Americans that the past is usually another country. If your present is their future (as in much modernization theory and in many self-satisfied tourist fantasies), and their future is your past (as in the case of the Philippine virtuosos of American popular music), then your own past can be made to appear as simply a normalized modality of your present. Thus, although some anthropologists may continue to relegate their Others to temporal spaces that they do not themselves occupy, post-industrial cultural productions have entered a post-nostalgic phase.

The crucial point, however, is that the United States is no longer the puppeteer of a world system of images, but is only one node of a complex transnational construction of imaginary landscapes. The world we live in today is characterized by a new role for the imagination in social life. To grasp this new role, we need to bring together: the old idea of images, especially mechanically produced images (in the Frankfurt School sense); the idea of the imagined community (in Anderson's sense); and the French idea of the imaginary (imaginaire), as a constructed landscape of collective aspirations, which is no more and no less real than the collective representations of Emile Durkheim, now mediated through the complex prism of modern media.

The image, the imagined, the imaginary -- these are all terms which direct us to something critical and new in global cultural process: the imagination as a social practice. No longer mere fantasy (opium for the masses whose real work is elsewhere), no longer simple escape (from a world defined principally by more concrete purposes and structures), no longer elite pastime (thus not relevant to the lives of ordinary people) and no longer mere contemplation (irrelevant for new forms of desire and subjectivity), the imagination has become an organized field of social practices, a form of work (both in the sense of labor and of culturally organized practice) and a form of negotiation between sites of agency ('individuals') and globally defined fields of possibility. It is this unleashing of the imagination which links the play of pastiche (in some settings) to the terror and coercion of states and their competitors. The imagination is now central to all forms of agency, is itself a social fact, and is the key component of the new global order. But to make this claim meaningful, it is necessary to address some other issues.

Homogenization and Heterogenization

The central problem of today's global interactions is the tension between cultural homogenization and cultural heterogenization. A vast array of empirical facts could be brought to bear on the side of the homogenization argument, and much of it has come from the left end of the spectrum of media studies, and some from other perspectives. Most often, the homogenization argument subspecies into either an argument about Americanization, or an argument about commoditization, and very often the two arguments are closely linked. What these arguments fail to consider is that at least as rapidly as forces from various metropolises are brought into new societies they tend to become indigenized in one or another way: this is true of music and housing styles as much as it is true of science and terrorism, spectacles and constitutions. The dynamics of such indigenization have just begun to be explored systemically and much more needs to be done. But it is worth noticing that for the people if Irian Jaya, Indonesianization may be more worrisome than Americanization, as Japanization may be for Koreans, Indianization for Sri Lankans, Vietnamization for the Cambodians, Russianization for the people of Soviet Armenia and the Baltic Republics. Such a list of alternative fears to Americanization could be greatly expanded, but it is not a shapeless inventory: for politics of smaller scale,
there is always a fear of cultural absorption by polities of larger scale, especially those that are nearby. One man's imagined community is another man's political prison.

This scalar dynamic, which has widespread global manifestations, is also tied to the relationship between nations and states. [...] [The] simplification of these many forces (and fears) of homogenization can also be exploited by nation-states in relation to their own minorities, by posing global commoditization (or capitalism, or some other such external enemy) as more real than the treat of its own hegemonic strategies.

The new global cultural economy has to be seen as a complex, overlapping, disjunctive order, which cannot any longer be understood in terms of existing center-periphery models (even those which might account for multiple centers and peripheries). Nor is it susceptible to simple models of push and pull (in terms of migration theory) or of surpluses and deficits (as in traditional models of balance of trade) or of consumers and producers (as in most neo-Marxist theories of development). Even the most complex and flexible theories of global development which have come out of the Marxist tradition are inadequately quirky and have failed to come to terms with what Lash and Urry have called disorganized capitalism. The complexity of the current global economy has to do with certain fundamental disjunctures between economy, culture and politics which we have only begun to theorize.

I propose that an elementary framework for exploring such disjunctures is to look at the relationship between five dimensions of global cultural flow which can be termed: (a) ethnoscapes; (b) mediascapes; (c) technoscapes; (d) finanscapes; and (e) ideoscapes. The suffix -scape allows us to point to the fluid, irregular shapes of these landscapes, shapes which characterize international capital as deeply as they do international clothing styles. These terms with the common suffix -scape also indicate that these are not objectively given relations which look the same from every angle of vision, but rather that they are deeply perspectival constructs, inflected by the historical, linguistic and political situatedness of different sorts of actors; nation-states, multinationals, diasporic communities, as well as sub-national groupings and movements (whether religious, political or economic), and even intimate face-to-face groups, such as villages, neighborhoods and families.

Indeed, the individual actor is the last locus of this perspectival set of landscapes, for these landscapes are eventually navigated by agents who both experience and constitute larger formations, in part by their own sense of what these landscapes offer.

These landscapes thus are the building blocks of what (extending Benedict Anderson) I would like to call imagined worlds, that is, the multiple worlds which are constituted by the historically situated imaginations of persons and groups spread around the globe. An important fact of the world we live in today is that many persons on the globe live in such imagined worlds (and not just in imagined communities) and thus are able to contest and sometimes even subvert the imagined worlds of the official mind and of the entrepreneurial mentality that surround them.

By ethnoscape, I mean the landscape of persons who constitute the shifting world in which we live: tourists, immigrants, refugees, exiles, guestworkers and other moving groups and persons constitute and essential feature of the world and appear to affect the politics of (and between) nations to a hitherto unprecedented degree. This is not to say that there are no relatively stable communities and networks, of kinship, friendship, of work and of leisure, as well as of birth, residence and other filiative forms. But it is to say that the warp of these stabilities is everywhere shot through with the woof of human motion, as more persons and groups deal with the realities of having to move or the fantasies of wanting to move. What is more, both these realities as well as these fantasies now function on larger scales, as men and women from villages in India think not just of moving to Poona or Madras, but of moving to Dubai and Houston, and refugees from Sri Lanka find themselves in South India as well as in Switzerland, just as the Hmong are driven to London as well as to Philadelphia. And as international capital shifts its needs, as production and technology generate different needs, as nation-states shift their policies on refugee populations, these moving groups can never afford to let their imaginations rest too long, even if they wish to.
By technoscape, I mean the global configuration, also ever fluid, of technology, and of the fact that technology, both high and low, both mechanical and informational, now moves at high speeds across various kinds of previously impervious boundaries. Many countries now are the roots of multinational enterprise: a huge steel complex in Libya may involve interests from India, China, Russia and Japan, providing different components of new technological configurations. The odd distribution of technologies, and thus the peculiarities of these technoscapes, are increasingly driven not by any obvious economies of scale, of political control, or of market rationality, but by increasingly complex relationships between money flows, political possibilities and the availability of both un- and highly skilled labor. So, while India exports waiters and chauffeurs to Dubai and Sharjah, it also exports software engineers to the United States -- indentured briefly to Tata-Burroughs or the World Bank, then laundered through the State Department to become wealthy resident aliens, who are in turn objects of seductive messages to invest their money and know-how in federal and state projects in India.

The global economy can still be described in terms of traditional indicators (as the World Bank continues to do) and studied in terms of traditional comparisons (as in Project Link at the University of Pennsylvania), but the complicated technoscapes (and the stifling ethnoscapes) which underlie these indicators and comparisons are further out of reach of the queen of the social sciences than ever before. How is one to make a meaningful comparison of wages in Japan and the United States or of real estate costs in New York and Tokyo, without taking sophisticated account of the very complex fiscal and investment flows that link the two economies through a global grid of currency speculation and capital transfer?

Thus it is useful to speak as well of financscapes, since the disposition of global capital is now a more mysterious, rapid and difficult landscape to follow than ever before, as currency markets, national stock exchanges, and commodity speculations move mega-mones through national turnstiles at blinding speed, with vast absolute implications for small differences in percentage points and time units. But the critical point is that the global relationship between ethnoscapes, technoscapes and finanscapes is deeply disjunctive and profoundly unpredictable, since each of these landscapes is subject to its own constraints and incentives (some political, some informational, and some techno-environmental), at the same time as each acts as a constraint and a parameter for movements in the others. Thus, even an elementary model of global political economy must take into account the deeply disjunctive relationships between human movement, technological flow and financial transfers.

Further refracting these disjunctures (which hardly form a simple, mechanical global infrastructure in any case) are what I call mediascapes and ideoscapes, though the latter two are closely related landscapes of images. Mediascapes refer both to the distribution of the electronic capabilities to produce and disseminate information (newspapers, magazines, television stations and film production studios), which are now available to a growing number of private and public interest through the world, and to the images of the world created by these media. These images of the world involve many complicated inflections, depending on their mode (documentary or entertainment), their hardware (electronic or pre-electronic), their audiences (local, national or transnational) and the interests of those who own and control them. What is most important about these mediascapes is that they provide (especially in their television, film and cassette forms) large and complex repertoires of images, narratives and ethnoscapes to viewers throughout the world, in which the world of commodities and the world of news and politics are profoundly mixed. What this means is that many audiences throughout the world experience the media themselves as a complicated and interconnected repertoire of print, celluloid, electronic screens and billboards. The lines between the realistic and the fictional landscapes they see are blurred, so that, the further away these audiences are from the direct experiences of metropolitan life, the more likely they are to construct imagined worlds which are chimerical, aesthetic, even fantastic objects, particularly if assessed by the criteria of some other perspective, some other imagined world.

Mediascapes, whether produced by private or state interests, tend to be image-centered, narrative-based accounts of strips of reality, and what they offer to those who experience and transform them is a series of elements (such as characters, plots and textual forms) out of which scripts can be formed of imagined lives,
their own as well as those of others living in other places. These scripts can and do get disaggregated into complex sets of metaphors by which people live as they help to constitute narratives of the Other and proto-narratives of possible lives, fantasies which could become prolegomena to the desire for acquisition and movement.

Ideoscapes are also concatenations of images, but they are often directly political and frequently have to do with the ideologies of states and the counter-ideologies of movements explicitly oriented to capturing state power or a piece of it. These ideoscapes are composed of elements of the Enlightenment worldview, which consists of a concatenation of ideas, terms and images, including 'freedom', 'welfare', 'rights', 'sovereignty', 'representation' and the master-term 'democracy'. The master-narrative of the Enlightenment (and its many variants in England, France and the United States) was constructed with a certain internal logic and presupposed a certain relationship between reading, representation and the public sphere. But their diaspora across the world, especially since the nineteenth century, has loosened the internal coherence that held these terms and images together in a Euro-American master-narrative and provided instead a loosely structured synopticon of politics, in which different nation-states, as part of their evolution, have organized their political cultures around different keywords.

As a result of the differential diaspora of these keywords, the political narratives that govern communication between elites and followings in different parts of the world involve problems of both a semantic and a pragmatic nature: semantic to the extent that words (and their lexical equivalents) require careful translation from context to context in their global movements; and pragmatic to the extent that the use of these words by political actors and their audiences may be subject to very different sets of contextual conventions that mediate their translation into public politics. (viz., what does the aging Chinese leadership mean when it refers to the dangers of hooliganism? What does the South Korean leadership mean when it speaks of discipline as the key to democratic industrial growth?)

These conventions also involve the far more subtle question of what sets of communicative genres are valued in what way (newspapers versus cinema, for example) and what sorts of pragmatic genre conventions govern the collective readings of different kinds of text. So, while an Indian audience may be attentive to the resonances of a political speech in terms of some keywords and phrases reminiscent of Hindi cinema, a Korean audience may respond to the subtle codings of Buddhist or neo-Confucian rhetorical strategy encoded in a political document. The very relationship of reading to hearing and seeing may vary in important ways that determine the morphology of these different ideoscapes as they shape themselves in different national and transnational contexts. This globally variable synaesthesia has hardly even been noted, but it demands urgent analysis. Thus democracy has clearly become a master-term, with powerful echoes from Haiti and Poland to the Soviet Union and China, but it sits at the center of a variety of ideoscapes (composed of distinctive pragmatic configurations of rough translations of other central terms from the vocabulary of the Enlightenment). This creates ever new terminological kaleidoscopes, as states (and the groups that seek to capture them) seek to pacify populations whose own ethnoscapes are in motion and whose mediascapes may create severe problems for the ideoscapes with which they are presented. The fluidity of ideoscapes is complicated in particular by the growing diasporas (both voluntary and involuntary) of intellectuals who continuously inject new meaning-streams into the discourse of democracy in different parts of the world.

This extended terminological discussion of the five terms I have coined sets the basis for a tentative formulation about the conditions under which current global flows occur: they occur in and through the growing disjunctures between ethnoscapes, technoscapes, finanscapes, mediascapes and ideoscapes. This formulation, the core of my model of global cultural flow, needs some explanation. First, people, machinery, money, images and ideas now follow increasingly non-isomorphic paths: of course, at all periods in human history, there have been some disjunctions between the flows of these things, but the sheer speed, scale and volume of each of these flows is now so great that the disjunctures have become central to the politics of global culture. The Japanese are notoriously hospitable to ideas and are stereotyped as inclined to export (all) and import (some) goods, but they are also notoriously closed to immigration, like Swiss, the Swedes and the Saudis. Yet the Swiss
and Saudis accept populations of guestworkers, thus creating labor diasporas of Turks, Italians and other circum-Mediterranean groups. Some such guestworker groups maintain continuous contact with their home nations, like the Turks, but others, like high-level South Asian migrants, tend to desire lives in their new homes, raising anew the problem of reproduction in a deterritorialized context. [...]  

Returning [...] to the ethnoscapes with which I began, the central paradox of ethnic politics in today's world is that primordia (whether of language or skin color or neighborhood or kinship) have become globalized. That is, sentiments whose greatest force is their ability to ignite intimacy into a political statement and turn locality into a staging ground for identity, have become spread over vast and irregular spaces as groups move, yet stay lined to one another through sophisticated media capabilities. This is not to deny that such primordia are often the product of invented traditions or retrospective affiliations, but to emphasize that because of the disjunctive and unstable interplay of commerce, media, national policies and consumer fantasies, ethnicity, once a genie contained in the bottle of some sort of locality (however large), has now become a global force, forever slipping in and through the cracks between states and borders.

But the relationship between the cultural and economic levels of this new set of global disjunctures is not a simple one-way street in which the terms of global cultural politics are set wholly by, or confined wholly within the vicissitudes of international flows of technology, labor and finance, demanding only a modest modification of existing neo-Marxist models of uneven development and state-formation. There is a deeper change, itself driven by the disjunctions between all the landscapes I have discussed, and constituted by their continuously fluid and uncertain interplay, which concerns the relationship between production and consumption in today's global economy. Here I begin with Marx's famous (and often mined) view of the fetishism of the commodity and suggest that this fetishism has been replaced in the world at large (now seeing the world as one, large, interactive system, composed of many complex subsystems) by two mutually supportive descendants, the first of which I call production fetishism, and the second of which I call the fetishism of the consumer.

By production fetishism I mean an illusion created by contemporary transnational production loci, which masks translocal capital, transnational earning-flows, global management and often faraway workers (engaged in various kinds of high-tech putting-out operations) in the idiom and spectacle of local (sometimes even worker) control, national productivity and territorial sovereignty. To the extent that various kinds of Free Trade Zones have become the models for production at large, especially of high-tech commodities, production has itself become a fetish, masking not social relations as such, but the relations of production, which are increasingly transnational. The locality (both in the sense of the local factory or site of production and in the extended sense of the nation-state) becomes a fetish which disguises the globally dispersed forces that actually drive the production process. This generates alienation (in Marx's sense) twice intensified, for its social sense is now compounded by a complicated spatial dynamic which is increasingly global.

As for the fetishism of the consumer, I mean to indicate here that the consumer has been transformed, through commodity flows (and the mediascapes, especially of advertising, that accompany them), into a sign, both in Baudrillard's sense of a simulacrum which only asymptotically approaches the form of a real social agent; and in the sense of a mask for the real seat of agency, which is not the consumer but the producer and the many forces that constitute production. Global advertising is the key technology for the worldwide dissemination of a plethora of creative, and culturally well-chosen, ideas of consumer agency. These images of agency are increasingly distortions of a world of merchandising so subtle that the consumer is consistently helped to believe that he or she is an actor, where in fact he or she is at best a chooser.

The globalization of culture is not the same as its homogenization, but globalization involves the use of a variety of instruments of homogenization (armaments, advertising techniques, language hegemonies and clothing styles) which are absorbed into local political and cultural economies, only to be repatriated as heterogeneous dialogues of national sovereignty, free enterprise and fundamentalism in which the state plays an increasingly delicate role: too much openness to global flows, and the nation-state is threatened by revolt -- the
China syndrome; too little, and the state exits the international stage, as Burma, Albania and North Korea in various ways have done. In general, the state has become the arbitrator of this repatriation of difference (in the form of goods, signs, slogans and styles). But this repatriation or export of the designs and commodities of difference continuously exacerbates the internal politics of majoritarianism and homogenization, which is most frequently played out in debates over heritage.

Thus the central feature of global culture today is the politics of the mutual effort of sameness and difference to cannibalize one another and thus to proclaim their successful hijacking of the twin Enlightenment ideas of the triumphantly universal and the resiliently particular. This mutual cannibalization shows its ugly face in riots, in refugee flows, in state-sponsored torture and in ethnocide (with or without state support). Its brighter side is the expansion of many individual horizons of hope and fantasy, in the global spread of oral dehydration therapy and other low-tech instruments of well being, in the susceptibility even of South Africa to the force of global opinion, in the inability of the Polish state to repress its own working classes, and in the growth of a wide range of progressive, transnational alliances. Examples of both sorts could be multiplied. The critical point is that both sides of the coin of global cultural process today are products of the infinitely varied mutual contest of sameness and difference on a stage characterized by radical disjunctures between different sorts of global flows and the uncertain landscapes created in and through these disjunctures.

The Work of Reproduction in an Age of Mechanical Art

I have inverted the key terms of the title of Walter Benjamin's famous essay to return this rather high-flying discussion to a more manageable level. There is a classic human problem which will not disappear however much global cultural processes might change their dynamics, and this is the problem today typically discussed under the rubric of reproduction (and traditionally referred to in terms of the transmission of culture). In either case, the question is as follows: how do small groups, especially families, the classical loci of socialization, deal with these new global realities as they seek to reproduce themselves, and in so doing, as it were by accident, reproduce cultural forms themselves? In traditional anthropological terms, this could be phrased as the problem of enculturation in a period of rapid culture change. So the problem is hardly novel. But it does take on some novel dimensions under the global conditions discussed so far in this essay.

In the first place, the sort of trans-generational stability of knowledge which was presupposed in most theories of enculturation (or, in slightly broader terms, of socialization) can no longer be assumed. As families move to new locations, or as children move before older generations, or as grown sons and daughters return from time spent in strange parts of the world, family relationships can become volatile, as new commodity patterns are negotiated, debts and obligations are recalibrated and rumors and fantasies about the new setting are maneuvered into existing repertoires of knowledge and practice. Often, global labor diasporas involve immense strains on marriages in general and on women in particular, as marriages become the meeting points of historical patterns of socialization and new ideas of proper behavior. Generations easily divide, as ideas about property, propriety and collective obligation wither under the siege of distance and time. Most important of all, the work of cultural reproduction in new settings is profoundly complicated by the politics of representing a family as 'normal' (particularly for the young) to neighbors and peers in the new setting. All this is, of course, not new to the cultural study of immigration.

What is new is that this is a world in which both points of departure and points of arrival are in cultural flux, and thus the search for steady points of reference, as critical life-choices are made, can be very difficult. It is in this atmosphere that the invention of tradition (and of ethnicity, kinship and other identity-markers) can become slippery, as the search for certainties is regularly frustrated by the fluidities of transnational communication. As group pasts become increasingly parts of museums, exhibits and collections, both in national and transnational spectacles, culture becomes less what Bourdieu would have called a habitus (a tacit realm of reproducible practices and dispositions) and more an arena for conscious choice, justification and representation, the latter often to multiple, and spatially dislocated audiences.
The task of cultural reproduction, even in its most intimate arenas, such as husband-wife and parent-child relations, becomes both politicized and exposed to the traumas of deterritorialization as family members pool and negotiate their mutual understandings and aspirations in sometimes fractured spatial arrangements. At larger levels, such as community, neighborhood and territory, this politicization is often the emotional fuel for more explicitly violent politics of identity, just as these larger politics sometimes penetrate and ignite domestic politics. When, for example, two offspring in a household split with their father on a key matter of political identification in a transnational setting, pre-existing localized norms carry little force. Thus a son who has joined the Hezbollah group in Lebanon may no longer get along with parents or siblings who are affiliated with Amal or some other branch of Shi'ite ethnic political identity in Lebanon. Women in particular bear the brunt of this sort of friction, for they become pawns in the heritage politics of the household, and are often subject to the abuse and violence of men who are themselves torn about the relation between heritage and opportunity in shifting spatial and political formations.

The pains of cultural reproduction in a disjunctive global world are, of course, not eased by the effects of mechanical art (or mass media, if you will) since these media afford powerful resources for counter-nodes of identity which youth can project against parental wishes or desires. At larger levels of organization, there can be many forms of cultural politics within displaced populations (whether of refugees or of voluntary immigrants), all of which are inflicted in important ways by media (and the mediascapes and ideoscapes they offer). A central link between the fragilities of culture reproduction and the role of the mass media in today's world is the politics of gender and of violence. As fantasies of gendered violence dominate the B-grade film industries that blanket the world, they both reflect and refine gendered violence at home and in the streets, as young men (in particular) come to be torn between the macho politics of self-assertion in contexts where they are frequently denied real agency, and women are forced to enter the labor force in new ways on the one hand, and continue the maintenance of familial heritage on the other. Thus the honor of women becomes not just an armature of stable (if inhuman) systems of cultural reproduction, but a new arena for the formation of sexual identity and family politics, as men and women face new pressures at work, and new fantasies of leisure.

Since both work and leisure have lost none of their gendered qualities in this new global order, but have acquired ever subtler fetishized representations, the honor of women becomes increasingly a surrogate for the identity of embattled communities of males, while their women, in reality, have to negotiate increasingly harsh conditions of work at home and in the non-domestic workplace. In short, deterritorialized communities and displaced populations, however much they may enjoy the fruits of new kinds of earning and new dispositions of capital and technology, have to play out the desires and fantasies of these new ethnoscapes, while striving to reproduce the family-as-microcosm of culture. As the shapes of cultures grow themselves less bounded and tacit, more fluid and politicized, the work of cultural reproduction becomes a daily hazard. Far more could, and should be said about the work of reproduction in an age of mechanical art: the preceding discussion was meant to indicate the contours of the problems that a new, globally informed, theory of cultural reproduction will have to face.

Shape and Process in Global Cultural Formations

The deliberations of the arguments that I have made so far constitute the bare bones of an approach to a general theory of global cultural processes. Focusing on disjunctures, I have employed a set of terms (ethnoscape, finanscape, technoscape, mediascape and ideoscape) to stress different streams or flows along which cultural material may be seen to be moving across national boundaries. I have also sought to exemplify the ways in which these various flows (or landscapes, from the stabilizing perspectives of any given imagined world) are in fundamental disjuncture with respect to one another. What further steps can we take towards a general theory of global cultural processes, based on these proposals?

The first is to note that our very models of cultural shape will have to alter, as configurations of people, place and heritage lose all semblance of isomorphism. Recent work in anthropology has done much to free us of the shackles of highly localized, boundary-oriented, holistic, primordialist images of cultural form and
But not very much has been put in their place, except somewhat larger if less mechanical versions of these images, as in Wolf's work on the relationship of Europe to the rest of the world. What I would like to propose is that we begin to think of the configuration of cultural forms in today's world as fundamentally fractal, that is, as possessing no Euclidean boundaries, structures or regularities. Second, I would suggest that these cultural forms, which we should strive to represent as fully fractal, are also overlapping, in ways that have been discussed only in pure mathematics (in set theory for example) and in biology (in the language of polythetic classifications). Thus we need to combine a fractal metaphor for the shape of cultures (in the plural) with a polythetic account of their overlaps and resemblances. Without this latter step, we shall remain enmired in comparative work which relies on the clear separation of the entities to be compared, before serious comparison can begin. How are we to compare fractally shaped cultural forms which are also polythetically overlapping in their coverage of terrestrial space?

Finally, in order for the theory of global cultural interactions predicated on disjunctive flows to have any force greater than that of a mechanical metaphor, it will have to move into something like a human version of the theory that some scientists are calling 'chaos' theory. That is, we will need to ask how these complex, overlapping, fractal shapes constitute not a simple, stable (even if large-scale) system, but to ask what its dynamics are: Why do ethnic riots occur when and where they do? Why do states wither at greater rates in some places and times rather than others? Why do some countries flout conventions of international debt repayment with so much less apparent worry than others? How are international arms flows driving ethnic battles and genocides? Why are some states exiting the global stage while others are clamoring to get in? Why do key events occur at a certain point in a certain place rather than in others? These are, of course, the great traditional questions of causality, contingency and prediction in the human sciences, but in a world of disjunctive global flows, it is perhaps important to start asking them in a way that relies on images of order, stability and systemacity. Otherwise, we will have gone far towards a theory of global cultural systems but thrown out 'process' in the bargain. And that would make these notes part of a journey towards the kind of illusion of order that we can no longer afford to impose on a world that is so transparently volatile.

Whatever the directions in which we can push these macro-metaphors (fractals, polythetic classifications and chaos), we need to ask one other old-fashioned question out of the Marxist paradigm: is there some pre-given order to the relative determining force of these global flows? Since I have postulated the dynamics of global cultural systems as driven by the relationship between flows of persons, technologies, finance, information and ideology, can we speak of some structural-causal order linking these flows, by analogy to the role of economic order in one version of the Marxist paradigm? Can we speak of some of these flows as being, for a priori structural or historical reasons, always prior to and formative of other flows? My own hypothesis, which can only be tentative at this point, is that the relationship of these various flows to one another, as they constellate into particular events and social forms, will be radically context-dependent. Thus, while labor flows and their loops with financial flows between Kerala and the Middle East may account for the shape of media flows and ideoscapes in Kerala, the reverse may be true of Silicon Valley in California, where intense specialization in a special technological sector (computers) and specific flows of capital may well profoundly determine the shape that ethnoscapes, ideoscapes and mediascapes may take.

This does not mean that the causal-historical relationship between these various flows is random or meaninglessly contingent, but that our current theories of cultural 'chaos' are insufficiently developed to be even parsimonious models, at this point much less to be predictive theories, the golden fleeces of one kind of social science. What I have sought to provide in this essay is a reasonably economical technical vocabulary and a rudimentary model of disjunctive flows, from which something like a decent global analysis might emerge. Without some such analysis, it will be difficult to construct what John Hinkson [...] calls a 'social theory of postmodernity' that is adequately global.

Marxist narrative, in cultural matters, is difficult territory indeed. My own effort, in this context, is to begin a restructuring of the
Marxist narrative (by stressing lags and disjunctures) that many Marxists might find abhorrent. Such a restructuring has to avoid the
dangers of obliterating difference within the third world, of eliding the social referent (as some French postmodernists seem inclined
do) and of retaining the narrative authority of the Marxist tradition, in favor of greater attention to global fragmentation, uncertainty
and difference.

These ideas are argued more fully in a book I am currently working on, tentatively entitled Imploding Worlds: Imagination and
disjuncture in the global cultural economy.
